proportional segments between parallel lines concept geometry - Aug 05 2023

web transcript when a line is drawn parallel to one side in a triangle two similar triangles are formed because corresponding

angles yield the aa similarity shortcut because the triangles are similar the segments formed by the parallel line are proportional segments

web jul 18 2012 the triangle proportionality theorem states that if a line parallel to one side of a triangle intersects the other two sides then it divides those sides proportionally we can extend this theorem to a situation outside of triangles where we have multiple parallel lines cut by transversals
