Mechanical Engineering Papers:

Emerging trends in mechanical engineering R. S. Agarwal, Dharma Pal Agrawal, S. G. Deshmukh, 1993 Advances in Mechanical Engineering Mark Zhou, 2011 The objective of the ICME 2011 conference was to provide a forum where researchers, educators, engineers, and government officials involved in the general area of Mechanical Engineering could disseminate their latest research results and exchange views on the future research directions of the field. The three volume set includes over 389 peer-reviewed papers grouped under the chapter headings Materials Engineering and Manufacturing Process and Mechanical Engineering and Automotive Engineering. This timely volume will be a useful source of new ideas. Review from Book News Inc. The April 2011 conference was co-sponsored by the Hong Kong International Industrial Electronics Center and Shenzhen University in China. The 400 papers are divided into three volumes on manufacturing processes, automotive engineering, and information technology. Two papers from Universiti Kebangsaan Malaysia review artificial intelligence methods for motor control and two papers from Chongqing University describe microfluidic devices for manipulating cells and sorting particles. Several papers such as one presenting a mobile application for identifying poisonous plants fall well outside the field of mechanical engineering. Paper topics relevant to mechanical engineering include fabrication of titanium composites by reaction hot pressing, stress analysis of a proton exchange membrane fuel cell, and soot emission from a direct injection engine. Annotation 2011 Book News Inc. Portland OR *Advances in material engineering and mechanical engineering : selected, peer reviewed papers from the 2011 International Conference on Material Engineering and Mechanical Engineering, Wuhan, China, August 20 - 21, 2011* Liang Gao, 2011 This book provided researchers and practitioners with the opportunity of highlighting current research directions and novel applications in materials engineering and mechanical engineering. The topics covered by the papers include functional materials, structural materials, composite materials, automotive engineering, manufacturing processes. It will be a useful reference work for engineers and academics worldwide who are interested in these topics. Review from Book News Inc. The conference as a whole highlights connections between research in materials and research in mechanics but some of the 25 individual papers do as well. The topics include structural information of barium hexaferrite and strategies for its syntheses, simulating fatigue crack propagation behavior based on low cycle fatigue, critical damage, impact resistance and energy absorption of functionally graded cellular structures, characterizing duplex treated coating fabricated by laser cladding and active screen plasma nitriding, and integrating uncertainty in the process of prognostics for electronics.
